

## AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior listings of claims in this application.

1. (Currently Amended) A method for making a long distance or international telephone call, comprising:

calling an assigned telephone number to access a sign-up calling plan service billed to a home plan at a home plan rate, the calling the assigned telephone number accessing a service switching point, the service switching point encountering a specific digit string trigger in response to the calling, the service switching point sending a call-related query to a service control point in response to the specific digit string trigger;

the service control point prompting generation of a calling plan service announcement;

responding to the a calling plan service announcement by entering a selection responsive to whether the long distance call is to be billed to a home long distance calling plan, a calling card plan, or a toll-free calling plan;

responding to a calling plan service announcement by entering the a telephone number associated with the sign-up calling plan service and a personal identification number to validate the caller; and

entering the long distance telephone number to complete the call.

2. (Original) The method of Claim 1, wherein the calling an assigned telephone number further comprises:

calling an assigned telephone number from a telephone other than the subscriber's home telephone.

3. (Cancelled)

4. (Original) The method of Claim 1, further comprising:

receiving a calling plan service announcement containing a notice that the call cannot be completed and the reason why not.

5. (Currently Amended) A method for routing and billing a telephone call placed under a sign-up calling plan, comprising:

receiving a telephone call at an originating switch; a service switching point, the service switching point encountering a specific digit string trigger in response to the telephone call, the service switching point sending a call-related query to a service control point in response to the specific digit string trigger;

the service control point prompting generation of a calling plan service announcement;

the calling plan service announcement prompting a caller to select whether the call is to be billed to the caller's home long distance calling plan, the caller's calling card plan, or the caller's toll-free calling plan;

sending a query to the service control point and receiving in return a carrier identifier, the carrier identifier identifying a service provider associated with the received call;

routing the call to a service switching point associated with the service provider and encountering a trigger that identifies a service control point servicing the sign-up calling plan;

in response to the trigger, sending a query to the service control point servicing the sign-up calling plan and receiving in return an instruction to prompt the caller to input their home telephone number and personal identification number;

in response to the caller input, accessing a customer database from the service control point and retrieving the caller's sign-up calling plan;

prompting the caller to input the telephone number to be called;

**BEST AVAILABLE COPY**

checking the caller's sign-up calling plan for authorization to complete the call; and  
in response to receiving call authorization, routing the call and generating a billing  
call record for the caller's sign-up calling plan.

6. (Original) The method of Claim 5, wherein the sign-up calling plan is a home  
long distance calling plan, a calling card plan, or a toll-free calling plan.

7. (Original) The method of Claim 5, wherein the receiving a telephone call  
comprises:

receiving a telephone call from a telephone other than the caller's home telephone.

8. (Original) The method of Claim 5, wherein:

the prompting the caller comprises prompting the caller via an instruction from the  
service control point to the service switching point; and

the routing the call and generating a billing call record is responsive to the service  
control point sending a routing message containing billing information to the service  
switching point.

9. (Cancelled)

10. (Original) The method of Claim 5, further comprising:

in response to receiving no call authorization, notifying the caller that the call cannot  
be completed and the reason why not.

11. (Currently Amended) A telephone system service control point having a processor programmed for:

receiving a call-related query from a service switching point, the service switching point generating the call-related query in response to a specific digit string trigger;

accessing a customer database to retrieve a caller's sign-up calling plan in response to a caller placing a call to access the caller's sign-up calling plan service;

checking the caller's sign-up calling plan for authorization to complete the call in view of information input by the caller during the call, the information including at least one of the caller's home telephone number and the caller's personal identification number; and

authorizing the call and sending to a service switching point a message containing call information and billing information relating to the caller's sign-up calling plan;

wherein the information input by the caller during the call further comprises a selection of whether the call is to be billed to a home long distance calling plan, a calling card plan, or a toll-free calling plan.

12. (Original) The service control point of Claim 11, wherein the processor is further programmed for:

accessing a customer database to retrieve a caller's sign-up calling plan in response to a caller placing a call from a telephone other than the caller's home telephone.

13. (Original) The service control point of Claim 11, wherein the caller's sign-up calling plan is a home long distance calling plan, a calling card calling plan, or a toll-free calling plan.

14. (Cancelled)

15. (Original) The service control point of Claim 11, wherein the information input by the caller during the call further comprises a selection of whether the call is an international call or not.
